

Viewline; glass slide-and-turn-system

Experience comfort and flexibility

Viewline's glass slide-and-turn-system offers you maximum comfort and flexibility. Let your veranda roof breathe and easily open the entire width of the façade. Enjoy light and warmth in fine weather. Or create a warm, enclosed space.

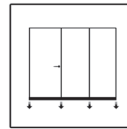

The innovative glass sliding/tilting system offers infinite possibilities. possibilities. Let the inside and outside flow into each other like never before.

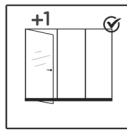

Viewline's glass slide-and-turn-system is suitable for any type of veranda roof and is fully custom-made. The panels can be shifted individually. This allows all panels to be unfolded separately on the side of the master door and still make optimal use of the space around the frame.

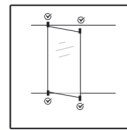

A low threshold
The threshold is only 2.5 cm high. Sufficient space to maintain the water retaining function. And low enough for a smooth transition.

Supporting system
Because of this system, the panels do not put any strain on the structure above the frame. This makes it an ideal solution for veranda covers.

Safe access
The slide-and-turn-system is equipped with a master door on the side of the frame. The lock has a multi-point locking system and thus provides extra protection.

Stable and solid
Each panel is locked at 2 points on both the top and bottom rails.

PRODUCT INFORMATION

Colour	RAL7024 / RAL9005
Mounting width	Up to 7000mm
Mounting height	Up to 2500mm
Panel width	Between 700mm - 1200mm
Number of doors	Up to 7 panels on one side
Glass	6.4mm toughened glass
